Imperator Black — Deck Builder

Rules chapter 11 · content v0.5.0 · 3" grid · compartments 6"×6", passages 6"×3", junctions and small rooms 3"×3"

Vessel	Board	Spine	Rooms	Heart (locks)	Locks	Hazard 5 / 6
Freighter / ore hauler	36"×18"	3	4–6	Bridge (Secured)	Secured	Darkness / Zero-g
Salvage tender	24"×24"	3	3–5	Bridge (Basic)	Basic	Fire / Darkness
Corvette / patrol craft	30"×18"	2	3–5	Bridge (Military)	Secured	Hull breach risk / Darkness
Station module	24"×24"	3	3–5	Operations centre (Hardened)	Secured	Darkness / Fire

• **1. Vessel:** from the mission, or roll: 1–2 Freighter / ore hauler · 3 Salvage tender · 4 Corvette / patrol craft · 5–6 Station module.
• **2. Spine:** docking passage against the middle of the west edge, running inward (the airlock). Then junction, passage, repeated for the spine count. At each junction after the first, roll the turn. A tile that won't fit turns toward more open board; if it fits nowhere, the spine ends.
• **3. Heart** against the far end of the spine, with a door (or beside the last spine tile with room).
• **4. Branches:** walk the spine from the airlock (skip the docking passage); one roll per passage and per junction. A room that won't fit isn't placed. At the vessel's most rooms, ignore further compartments; a side passage then ends in a small room.
• **5. Fill:** fewer rooms than the minimum? Add one beside each spine tile from the far end back. Still short: dry-erase map.
• **6. Rooms:** roll each compartment (not the heart) and each small room. † unique: on a repeat, take the next line down.
• **7. Second doors:** each compartment, for each other tile it touches with no door (not small rooms): roll.
• **8. Doors:** spine and side-passage joints are open archways; roll every other door. Heart doors: always locked at the heart's level. Other locks: the room's level, else the vessel's.
• **9. Cover:** heavy pieces in the middle, light pieces in the corners farthest from the doors, a clear lane in front of every door.
• **10. Hazard:** roll once.

Spine turn

d6	Result
1–4	Straight on.
5–6	Turn left or right, toward the side with more open board (your choice if equal).

Each passage

d6	Result
1	Plain walls.
2–4	A compartment on one side (the side with more open board; your choice if equal).
5	A compartment on each side.
6	A compartment on one side and a small room on the other.

Each junction (open sides)

d6	Result
1–3	Plain walls.
4–5	A small room on one open side.
6	A side passage (one passage tile) off one open side, ending in a compartment.

Station modules add 1.

Second door

d6	Result
1–3	No second door.
4–6	A second door into the other tile. Second doors make loops: more than one way round.

Door state

d6	Result
1–2	Open.
3–5	Closed.
6	Locked, at the room's security level.

Small room

d6	Room
1	Store
2	Locker room
3	Maintenance access: A crawlway hatch leads off the deck: Size 2 or less only. Missions may use it as a second way in or out.
4	Utility closet
5	Escape pod: Enemy models may flee by it: a model that ends its activation here leaves the board.
6	Secondary airlock: A second way in or out for either side; mission reinforcements may arrive here.

Hazard

d6	Result
1–4	No hazard.
5	The vessel's first hazard.
6	The vessel's second hazard.

Darkness	Power failure: the whole deck is in darkness (chapter 8).
Zero-g	Gravity is off on the whole deck (chapter 8).
Fire	Place a fire marker in the middle of one compartment: the workshop, salvage bay or life support if there is one, otherwise the one nearest the heart (chapter 8).
Hull breach risk	Every outer wall is hull: a breaching charge or frag that damages it causes decompression (chapter 8).

Rooms (d6, per compartment)

d6	Freighter	Salvage tender	Corvette	Station module
1	Cargo hold	Salvage bay	Armoury †	Laboratory
2	Cargo hold	Salvage bay	Crew quarters	Habitation
3	Cargo hold	Workshop	Sensors and comms †	Storage
4	Crew quarters	Crew quarters	Engineering †	Life support †
5	Mess	Mess	Mess	Medbay †
6	Engineering †	Engineering †	Medbay †	Data core †

Room cover

Room	Cover
Cargo hold	Container (heavy): A shipping container or crate stack taller than a model; Crates (light): Two or three crates, waist-high; Crates (light): Two or three crates, waist-high
Salvage bay	Salvage (heavy): A large piece of wreckage or a dismantled engine; Scrap (light): A pile of scrap, plating or barrels; Scrap (light): A pile of scrap, plating or barrels
Workshop	Machine (heavy): A heavy machine: lathe, press or fabricator; Bench (light): A workbench or tool rack
Crew quarters	Bunks (light): Bunks or lockers; Bunks (light): Bunks or lockers
Mess	Tables (light): Tables and benches; Counter (light): A galley counter
Engineering	Reactor housing (heavy): A reactor, drive housing or large machinery block; Console (light): A control console
Bridge	Console bank (light): A bank of consoles; Console bank (light): A bank of consoles
Armoury (Hardened locks)	Weapon racks (light): Weapon racks or ammunition lockers; Weapon racks (light): Weapon racks or ammunition lockers
Sensors and comms	Consoles (light): Consoles and display screens; Server stack (heavy): A floor-to-ceiling equipment stack
Medbay	Beds (light): Medical beds or a treatment station; Cabinets (light): Supply cabinets
Laboratory	Equipment (heavy): A large piece of lab equipment; Benches (light): Lab benches
Habitation	Furniture (light): Furniture, bunks or partitions; Lockers (light): Lockers
Storage	Shelving (heavy): Tall shelving or a container; Crates (light): Crates, waist-high
Life support	Scrubbers (heavy): Air scrubbers or tanks; Pipework (light): Low pipework or a pump
Data core (Hardened locks)	Core (heavy): A floor-to-ceiling data core column; Consoles (light): Access consoles
Operations centre (Hardened locks)	Console bank (light): A bank of consoles; Plot table (light): A plotting table or holo-display
Store	Crates (light): A crate
Locker room	None
Maintenance access	None
Escape pod	None
Utility closet	Pipework (light): Pipes or a pump
Secondary airlock	None
