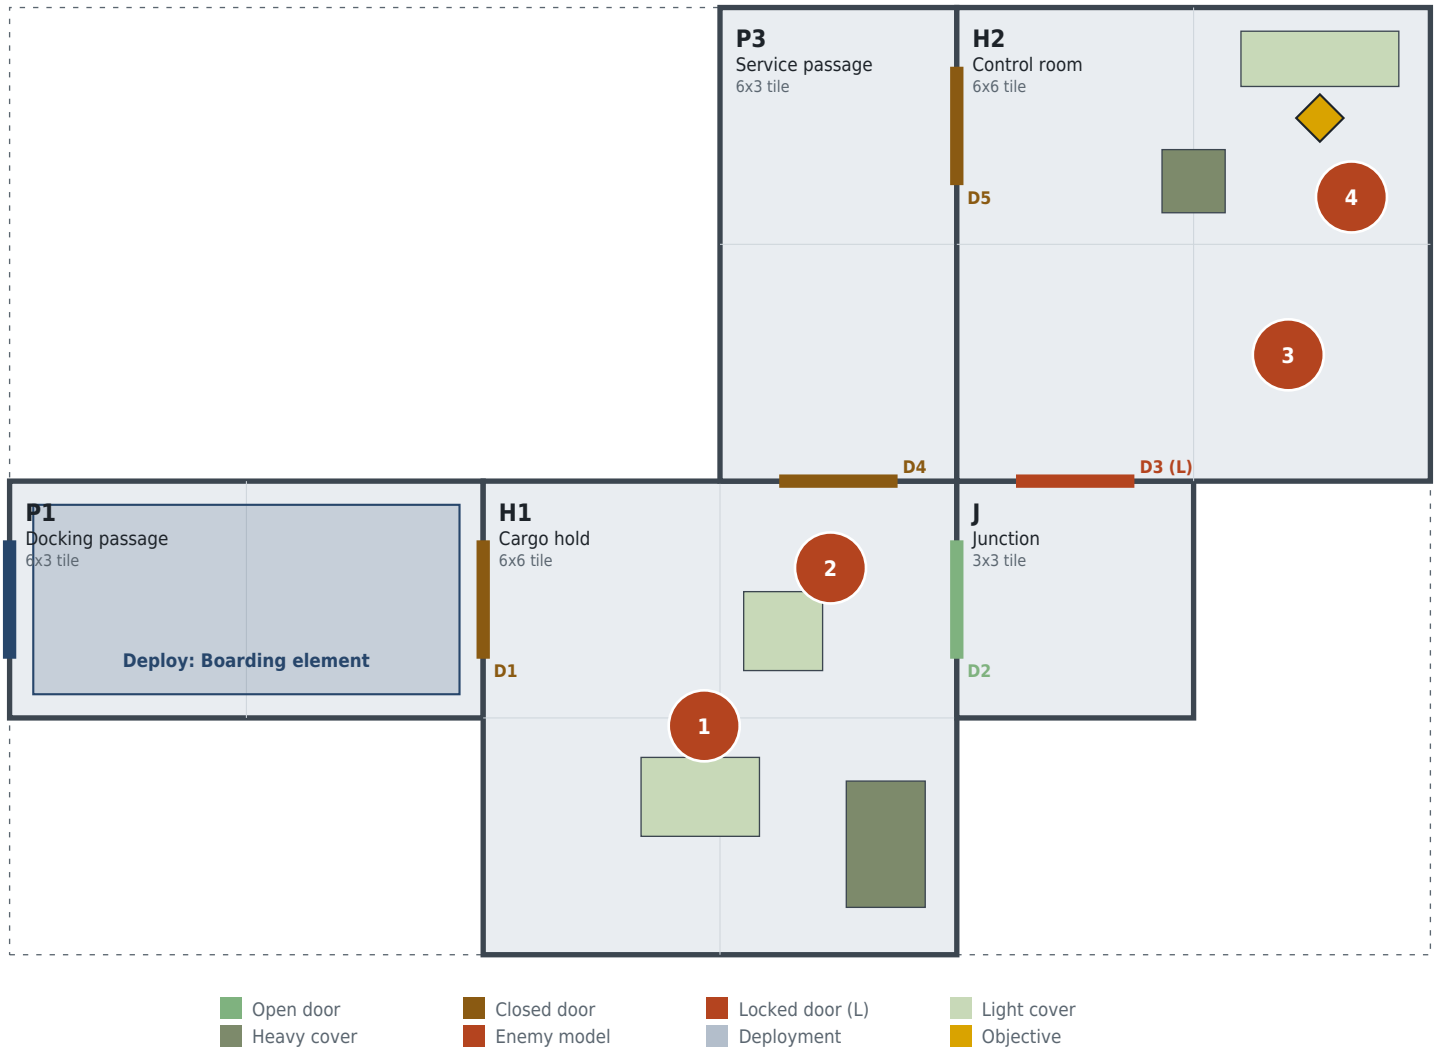
Gym 1: First Breach

Imperator Black gym scenario · rules v0.4 · solo · about 60–90 minutes

Freespace Solutions has seized the ore hauler MV Halden's Promise under a disputed debt claim and is holding it at a remote mooring. Command wants its navigation data core before Freespace wipes it: the logs should show where the ship was taken and who paid for it. A Task Force Boone boarding element has docked at the forward airlock. The crew has been taken off; a small security detail remains aboard.



Scale: each grid square is 3". Board 18" × 12". The blue bar on the west wall of P1 is the airlock: the way in and out. Enemy positions are model centres.

Task Force Boone (6)

- VAT Team Leader (Team Leader)
- VAT Assaulter (Breacher)
- VAT Assaulter (Assaulter)
- VAT Gunner (Gunner)
- Data Specialist (Specialist)
- Pathfinder (Medic (attached))

Freespace Solutions (4)

- 1. Asset Security Officer (Carbine): Unaware
- 2. Asset Security Officer (Shotgun): Unaware
- 3. Asset Security Gunner (LMG): Overwatch, facing D3 and D5
- 4. Recovery Captain (SMG): Unaware, guarding the data core

Setup

- Tiles: two 6"×6", two 6"×3" (one stood on end as the service passage) and one 3"×3". The rest of the board is open space outside the hull.
- Five doors as marked: D1, D4 and D5 closed; D2 open; D3 locked.
- Cover as marked. Light: crates and the console bank. Heavy: the cargo loader and the column.
- Enemy models 1–4 on their marked positions. Model 3 starts with an Overwatch marker.
- Task Force Boone deploys wholly inside the docking passage.

Special rules

Surprise. Task Force Boone wins initiative in round 1 automatically.

Unaware. Unaware enemy models do not activate and cannot react. The whole enemy becomes aware at once when a Task Force Boone model makes noise (fires a weapon without the Silenced keyword, throws a frag or flashbang, uses a breaching tool or detonates a charge), or ends a Move in an enemy model's line of sight. Model 3 is not unaware: it is on Overwatch from the start.

Locked door D3. Open it with a breaching charge, a breaching tool (2d6 + Physique, 8+) or the Data Specialist's hacking rig (Secured: 2d6 + Tech, 9+, +1 for each earlier failed attempt, quiet). Or go around through the service passage.

Data core. A Task Force Boone model in base contact with the data core may Interact to pull it: automatic for the Data Specialist, 2d6 + Tech 8+ for anyone else. That model now carries it (if it goes Down, another model in base contact may pick it up with an Interact).

Prisoner. If the Recovery Captain is overpowered in close combat, Task Force Boone may capture it instead of putting it Down.

Victory

Length: 8 rounds. **Goal:** Carry the data core back into the docking passage (the airlock) by the end of round 8.

Decisive: Data core extracted and no Task Force Boone model Dead. Bonus: Recovery Captain captured.
Marginal: Data core extracted, with one or more Task Force Boone models Dead.
Failure: Data core not extracted by the end of round 8, or the boarding element breaks.

Enemy orders (stopgap until Phase 3)

Who activates next: the first eligible enemy model from this list:
1. A model with 3+ Suppression (it Rallies).
2. A model in the open with a target in sight.
3. A model in cover with a target in sight.
4. Any other model, nearest the data core first.

Model	Each action: take the first that applies
All	If Pinned: Rally, then Find Cover or Move to the nearest cover. If in the open with cover within one Move: Move to it.
Asset Security Officer	Target within short range: Aim, then Shoot. Otherwise Move to cover closer to the target, then Shoot. No target in sight: go on Overwatch facing the nearest door.
Asset Security Gunner	Two or more targets in sight: Suppressive Fire at the nearest, then Shoot another. One target: Shoot it twice. None: Overwatch.
Recovery Captain	Rally the most suppressed friend within 6", then act as an Officer. Never leaves the control room.

• Targets: the nearest visible Task Force Boone model not in cover; if all are in cover, the one in the least cover; ties by dice.
• Reactions: a model on Overwatch always Shoots at the first trigger it can. An unactivated model reacts only when shot at in the open, by Moving to cover.
• Close combat: an enemy model Breaks only if it lost the last exchange and has a Wounded marker or 3+ Suppression.
• Choices the orders don't settle: the option nearest the data core, then the lowest-numbered model.

Watch for, and log afterwards

• Do reactions and Overwatch make doorways feel dangerous without feeling unfair?
• Are Wounded markers and Wounds easy to track?
• Does close combat resolve in a few exchanges?
• Is the hack, breach or go-around choice at D3 a real decision?
• Can the cards and quick reference be read at arm's length?
• Where did the enemy orders act stupidly or need a judgment call? (Phase 3 input.)

Log the game with docs/playtests/TEMPLATE.md.
