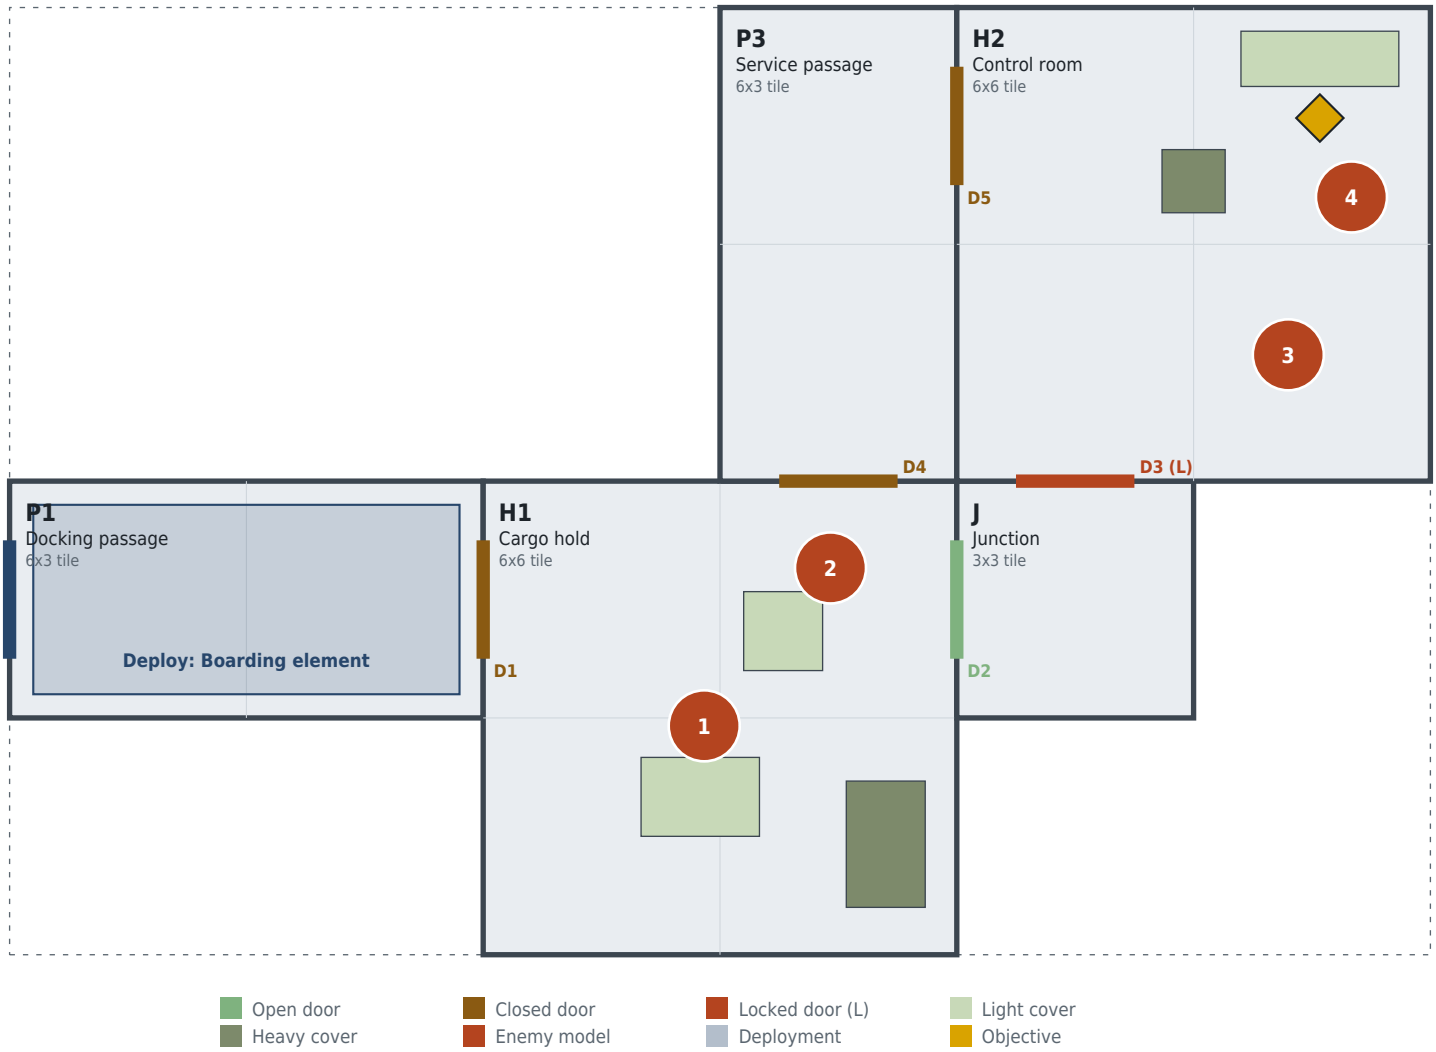
Gym 1: First Breach

Imperator Black gym scenario · rules v0.5 · solo · about 60–90 minutes

Freespace Solutions has seized the ore hauler MV Halden's Promise under a disputed debt claim and is holding it at a remote mooring. Command wants its navigation data core before Freespace wipes it: the logs should show where the ship was taken and who paid for it. A Task Force Boone boarding element has docked at the forward airlock. The crew has been taken off; a small security detail remains aboard.



Scale: each grid square is 3". Board 18" × 12". The blue bar on the west wall of P1 is the airlock: the way in and out. Enemy positions are model centres.

Task Force Boone (6)

- VAT Team Leader (Team Leader)
- VAT Assaulter (Breacher)
- VAT Assaulter (Assaulter)
- VAT Gunner (Gunner)
- Data Specialist (Specialist)
- Pathfinder (Medic (attached))

Freespace Solutions (4)

- 1. Asset Security Officer (Carbine): Unaware
- 2. Asset Security Officer (Shotgun): Unaware
- 3. Asset Security Gunner (LMG): Alerted, on Overwatch facing D3 and D5
- 4. Recovery Captain (SMG): Unaware, guarding the data core

Setup

- Tiles: two 6"×6", two 6"×3" (one stood on end as the service passage) and one 3"×3". The rest of the board is open space outside the hull.
- Five doors as marked: D1, D4 and D5 closed; D2 open; D3 locked.
- Cover as marked. Light: crates and the console bank. Heavy: the cargo loader and the column.
- Enemy models 1–4 on their marked positions. Model 3 starts with an Overwatch marker.
- Task Force Boone deploys wholly inside the docking passage.

Special rules

Surprise. Task Force Boone wins initiative in round 1 automatically.

The enemy. Run the enemy with chapter 10 and the behavior cards. Models 1, 2 and 4 start Unaware; model 3 starts Alerted, on Overwatch. The enemy's objective, for tie-breakers, is the data core. The recovery captain never leaves the control room.

Locked door D3. Open it with a breaching charge, a breaching tool (2d6 + Physique, 8+) or the Data Specialist's hacking rig (Secured: 2d6 + Tech, 9+, +1 for each earlier failed attempt, quiet). Or go around through the service passage.

Data core. A Task Force Boone model in base contact with the data core may Interact to pull it: automatic for the Data Specialist, 2d6 + Tech 8+ for anyone else. That model now carries it (if it goes Down, another model in base contact may pick it up with an Interact).

Prisoner. If the Recovery Captain is overpowered in close combat, Task Force Boone may capture it instead of putting it Down.

Victory

Length: 8 rounds. **Goal:** Carry the data core back into the docking passage (the airlock) by the end of round 8.

Decisive: Data core extracted and no Task Force Boone model Dead. Bonus: Recovery Captain captured.
Marginal: Data core extracted, with one or more Task Force Boone models Dead.
Failure: Data core not extracted by the end of round 8, or the boarding element breaks.

The enemy

Run the enemy with chapter 10 and the behavior cards: read each list top-down and take the first line that applies.

Element	Models	Behavior	Drill
Asset security	1, 2, 3	Sentry	Fire and manoeuvre; Bounding and grenades with model 4 within 6"
Recovery captain	4	Leader	Bounding and grenades

Watch for, and log afterwards

• Do reactions and Overwatch make doorways feel dangerous without feeling unfair?
• Are Wounded markers and Wounds easy to track?
• Does close combat resolve in a few exchanges?
• Is the hack, breach or go-around choice at D3 a real decision?
• Can the cards and quick reference be read at arm's length?
• Does the door sequence settle who reacts when a door opens? Did you crack and throw?
• Where did the behavior cards act stupidly, or need a judgment call? Count the judgment calls per round (target: at most one).
• Did noise and the alarm make the enemy respond: investigate, cover doors, converge?

Log the game with docs/playtests/TEMPLATE.md.
